Fling Visualizer

To do item flings we need to know how world coordinates from 1 spot in a level will look like in another level. Or to get a better understanding visually where we currently are setting up our next fling.
Also this gives you the option to scan your current screen to see all possible areas you can fling to within your game screen region so you can see where your fling position gets snapped to the world.

Download

Download the latest version from here. In the Assets dropdown, download the divinity_fling_visualizer_v#.#.#.zip
